Soil as a carbon sink – goal conflicts and how to solve them

Carbon sequestration in soil relates to a range of different perspectives and policy areas such as biodiversity, production economics and climate aspects. This complexity creates challenges in terms of managing trade-offs and setting effective policies for tomorrow's sustainable soil management.

In this film (click to the right), part 2 out of 4, we will look into these different

perspectives, how policymakers can navigate among potential goal conflicts, what research says about these potential goal conflicts, what the main challenges are and how we can solve them.

Networking gives great synergies in research

The researcher network "Effects of extreme weather on agricultural production and environment" has worked to establish a solid platform for Nordic researchers to cooperate in the cross-cutting research fields of climate change, agricultural production including forestry, and environmental impacts. The coordinator Marianne Bechmann (in the video to the left) tells about why Nordic networking is essential for the Nordic green sector.

What is the potential for storing carbon in Nordic soils?

In this film, part 1 out of 4, we are exploring the exciting potential of the Nordic countries to capture soil carbon following climate change and how to turn agriculture and forest soils into carbon sinks.

Cooperation needed for management of the wild boar

The Nordic countries are managing the wild boar population in completely different ways. But national management is difficult when the wild boars move across borders. We need Nordic cooperation!

This report provides a knowledge base on the topic and proposals for action.
